The growing demand and awareness of consumers for the use of sustainable products, not aggressive with the environment, has led us to develop a line that adapts to the demands of the market.

For this we have launched ELITE. A new 2-in-1 concept that incorporates the REFIBRA™ Technology (cotton cuttings from waste from the fashion industry + TENCEL™ natural fiber). The result allows us to offer an innovative and sustainable product based on the 3R philosophy - REDUCE, REUSE, RECYCLE.

Its pleasant touch, softness and great moisture absorption power combined with our PERLAM® system, make ELITE the most technologically advanced product while contributing to CIRCULAR ECONOMY.

FITTED

NATURAL ORIGIN

The revolutionary PERLAM® system consists of an intelligent membrane which quickly refuses the liquids and expulses them to the outside, keeping the skin always dry. At the same time, it allows the skin to breathe though the fabric, creating a pleasant environment that contributes to rest.

PERLAM® is a registered trademark, the technology of which is only granted, under license, to best textile firms.

### NEW GENERATION OF ECOLOGICAL FABRICS

The pioneer technology REFIBRA is a revolutionary textile solution made of cotton scraps left over the production of cotton clothing and combined with LYOCCELL TENCEL™ fibers of botanical origin. A new fiber concept made of recycled materials that contribute to a lower dependence on natural raw materials. Therefore, it has been recognized internationally for its environmentally responsible closed cycle production process.

### REFIBRA™ technology - contribution to circular economy
